## ABSTRACT OF THE DISCLOSURE

1       A steering apparatus for a vehicle has: a steering shaft rotatable with a steering  
2 force applied from a steering wheel; a cable unit for transmitting a rotational force  
3 with an output member and a pair of cable wires; and a speed reducing gear disposed  
4 between the steering shaft and the cable unit. The output member makes a rotation in  
5 such a manner that the pair of the cable wires are pulled relative to each other. The  
6 rotational force is transmitted from the steering shaft to a side having a tire-and-  
7 wheel.
